

## Port Coquitlam Heavy Equipment Training Courses

Port Coquitlam Heavy Equipment Training Courses - When choosing a heavy equipment operator course, the first step should be to determine the capacity in which you would be working with heavy machinery. You could find the best course to teach you how to operate the machinery or to fix these machines. Many choices are available, be sure to align your career goals and your research so you can determine which classes would be right for you. It is essential to choose classes which are approved and recognized by the local governing bodies in your area.

The kinds of different heavy equipment certifications differ greatly. Most operator training courses will be specific to the kind of equipment you want to operate. Courses offered for crane operator certification will be different compared to the course provided for forklift certification. Crane certification will allow you to operate a crane safely, whereas the latter will enable you to deal with various kinds of materials handling machinery. It is a great idea to check with your existing employer before enrolling in whatever classes in order to ensure the ones you select will fulfill the training requirements your employer has planned for you.

### Heavy Equipment Operator Training

HEO or the heavy equipment operator courses will provide you with the knowledge and skills required in order to enter the workforce as an entry level heavy equipment operator. In this twelve week course along with a practicum, you would focus on jobsite fundamentals such as: safety, health and environmental awareness and training, machine maintenance and operation, and use of earth moving methods in hands-on situations.

Operator training will help people work with their chosen heavy equipment like for instance a grader, loader, compactor, an excavator and a dozer. The required skills that an operator will require to work with heavy equipment consists of: good problem solving skills, excellent oral communication skills, excellent spatial ability and good vision, physical strength and stamina, the ability to work alone or well with others in a team and excellent eye-hand coordination along with excellent manual dexterity.

Technical skills are likewise necessary to operate these machines. These skills consist of: general mechanical ability, being able to operate equipment and power tools, understanding of safe working procedures, the ability to follow technical specifications, grade plans and read instructions, the ability to make basic measurements and mathematical calculations, and the ability to carry out basic mechanical repairs and maintenance.
