

Port Coquitlam Warehouse Forklift Training Programs

Port Coquitlam Warehouse Forklift Training Programs - Warehouses can either be commercial, retail or industrial facilities, functioning from product distribution services to bulk product retailing. Regardless of the type of warehouse, personnel within warehouse settings must be well trained in safety measures related to material storage and handling, loading docks, conveyor systems, and pallet jacks and forklifts. Good housekeeping is essential to an orderly and safe warehouse setting.

The loading dock system is often built into the warehouse at a height from the ground making it easy to move stuff coming in and moving out of the warehouse. Personnel will also unload and load merchandise and materials from the ramps and elevated docks. Particular attention must be paid to safety practice throughout this stage. To avoid falls, install yellow striping along the edge of ramps and docks. Pay attention to the area around delivery trucks which are parked at the loading dock, specifically the area between dock and the truck. Be sure that truck wheels are chocked when unloading.

In order to distribute products in the facility, some warehouses utilize a conveyor system. These systems are made with moving belts and wheels that could pose a pinch point hazard. Keep hair and parts of the body well away from conveyors to prevent injury. Elevated conveyors pose a hazard to staff below if safety nets are absent. Personnel have to know how to stop conveyors in case of emergency. Be aware of the location of emergency stop buttons and off switches. When servicing conveyors, tag out/lock out measures are mandatory.

To make it easier to move things, forklifts are pallet jacks are most usually used. The lift truck operator would require training and certification. Operators of pallet jacks do not need certification, but should be trained about the equipment. Training programs instruct operators in the proper methods for hoisting things and moving them to their assigned place. Neither pallet jacks nor forklifts must ever be made use of to transport or lift personnel.

To allow for enough room for equipment and people to pass, rack systems and storage shelving help to create an orderly and efficient work area, specially if they are properly braced. Careful and slow placement of good is required to avoid accidents caused by products falling off the facing aisle. Aisles must be kept clear by storing products flat and in the shelving units. Pallets are made use of for stacking products. They must be in good condition, and palletized products must be baled or shrink-wrapped, whenever possible.

Personal protective equipment (or also known as PPE) must be worn, as appropriate, to protect workers' heads, limbs, hands and feet. Bump caps or hard hats, steel-toed shoes and gloves are common PPE.

Slippery floors pocked with pits and dents present a hazard. Good housekeeping practices involve keeping warehouse docks and floors clear of debris, oil and dirt. The space must be kept clear of garbage, boxes and baling materials.
